- Knowledgeable in utilizing Confluence to create and maintain project documentation, team knowledge bases, and shared resources.

Education

DIGITAL CAMPUS Paris | Digital concept designer (web development major)   2019 - 2022 graduate

- Gained considerable skills in front-end development, including HTML, CSS, Sass, and Javascript. Acquired proficiency in responsive design techniques, utilizing media queries, Bootstrap, and CSS grid. Demonstrated capability in creating user-friendly websites.
- Participated actively in collaborative group projects and hackathons, leveraging GitHub for seamless teamwork and utilizing communication platforms like Slack or Discord for effective group coordination.
- Acquired skills in back-end development (PHP/ my SQL), contact forms, login systems, and security.
- Learned about optimisation using tools such as google lighthouse to improve a website's performance and SEO.
- Discovered and implemented the concept of eco-conception in programming. We used online platforms such as websitecarbon.com to measure the carbon footprint of websites and make adjustments resulting in a more eco-friendly design and performance.
- Made use of various debugging tools such as Chrome DevTools, Firefox Javascript debugger, VS code debugger and its extensions.
- Acquired basic UX/UI fundamentals, wire framing and prototyping using Figma

SKEMA Business School | Global management (marketing major)   2016 - 2018

- Marketing, project management, accounting
- Developed proficiency in creating effective business plans through dedicated learning and practical application.
